# Uses

## Rationale

Into today's high tech world with all the very sophisticated presentation technology available it is very easy to forget a simple, practical solution to capturing and presenting information. The flipchart stand. It is comparatively inexpensive, requires no electricity or screen. Simply wheel it in, adjust the height to your preference and start using it. You do not have to be gentle with it. It is a high quality product built to last a lifetime. It likes to be used.

## Obvious Uses

- For all kinds of presentations
- To capture information (one-to-one, one-to-group, group-to-group)
- As a display/information board (specifically useful with changing information)
- In classrooms and teaching institutions of any kind
- To track and record relevant information in manufacturing plants

## Not So Obvious Uses

- A portable display for "today's specials" in Restaurants
- A creative drawing board/palette for children's play and learning
- As a palette for artists in "life-drawing" classes
- A movable display for "story-boarding" (film and anime industry)
- A portable board for strategy coaching for sports teams

## Additional Uses

- At The Best Flip Chart Inc. we are always looking for additional uses our customers are finding for our product.
- If you have a special use that is not obvious that you would like to share with us please do so by emailing us at [info@thebestflipchart.com](mailto:info@thebestflipchart.com).
- If you are using product in an unusual way, and have a digital photo that you would like to share please feel free to do so. We will post these unusual uses on our Users Notice Board for all to see.

# About Us

## Philippe Denichaud

The Best Flip Company Inc. was Philippe's brain-child. In one of the companies that Philippe owns he spends a lot of time in adult education presenting and facilitating skill-building workshops. For years he was unable to find a flipchart stand that meets all the specific needs and demands of the novice or veteran facilitator/presenter. So he decided to design and build one for himself. When sharing this idea with others, what had similar needs, they were not only interested but said they would want one or many depending on the demand, and so the company was born.

## Darren Nordby

Darren is Philippe's partner and the technical brains behind the product. He brings many years of experience and a vast knowledge in manufacturing high-precision products for the aerospace industry. His extraordinary ability to design, spec, source and control the quality and assembly of this fine product is what allows us to offer the amazing guarantee that we do. Without him there would be no product.

# Contacts
